

We Make Our Own PTO Mills Here in the USA!

Yes! MakeYourOwnPellets.com currently manufactures the best US made PTO pellet machine for wood pellet production! Next year we will begin offering models powered by single or 3 phase electric motors and models powered by gas or diesel engines!

Designed to keep on going, the New Michigan PTO Pellet Machine is Fab Weld constructed which makes this baby virtually indestructible! Combine that with a heavy duty worm gearbox and you've simply got the best performing small production wood pellet mill on the market today! Make Your Own Pellets, LLC is the hands-down leader specializing in small wood pellet production machinery. The New Michigan PTO Pellet Mill was over a year in design and testing to bring you reliability right out of the box! It comes with one full year defective parts warranty.

A bonus feature to the mill is the future ability to "trade up" in size. The mill we currently offer is a 9" model but we will soon offer 8" and 12" models. (The size refers to the diameter of the die plate inside.) All models will be based on the same gearbox enabling the consumer to interchange just the top housing to increase production rather than purchasing an entire unit.

Another bonus when purchasing from us is our free forum where members can ask questions, share experiences, and give advice on making pellets. The forum is open to customers and non-customers alike, many of whom have found that purchasing a mill is only half the equation. We also offer an ebook to help the "Newbie" to get started. (The ebook is free with a mill purchase. See details at <http://www.makeyourownpellets.com>)
